

About the Survey

The analysis in this report is based on telephone interviews conducted May 15-18, 2014 among a national sample of 1,000 adults, 18 years of age or older, living in all 50 U.S. states and the District of Columbia (500 respondents were interviewed on a landline telephone, and 500 were interviewed on a cell phone, including 291 who had no landline telephone). The survey was conducted by interviewers at Princeton Data Source and MKTG under the direction of Princeton Survey Research Associates International. A combination of landline and cell phone random digit dial samples were used; both samples were provided by Survey Sampling International. Interviews were conducted in English and Spanish. Respondents in the landline sample were selected by randomly asking for the youngest adult male or female who is now at home. Interviews in the cell sample were conducted with the person who answered the phone, if that person was an adult 18 years of age or older. For detailed information about our survey methodology, see <http://people-press.org/methodology/>.

The combined landline and cell phone sample are weighted using an iterative technique that matches gender, age, education, race, Hispanic origin and nativity and region to parameters from the 2012 Census Bureau's American Community Survey and population density to parameters from the Decennial Census. The sample also is weighted to match current patterns of telephone status, based on extrapolations from the 2013 National Health Interview Survey. The weighting procedure also accounts for the fact that respondents with both landline and cell phones have a greater probability of being included in the combined sample and adjusts for household size among respondents with a landline phone. Sampling errors and statistical tests of significance take into account the effect of weighting.

The following table shows the unweighted sample sizes and the error attributable to sampling that would be expected at the 95% level of confidence for different groups in the survey:

Group	Unweighted sample size	Plus or minus ...
Total sample	1,000	3.6 percentage points
Republican	253	7.2 percentage points
Conservative Rep	178	8.6 percentage points
Democrat	290	6.8 percentage points
Liberal Dem	110	11.0 percentage points
Independent	358	6.1 percentage points

Sample sizes and sampling errors for other subgroups are available upon request. In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.
